PROFESSIONAL SUMMARY

QA Automation Lead and Quality Engineering professional with 13+ years of experience driving software quality, test automation, quality engineering strategy, release governance, and Agile delivery across Web, Mobile, API, Data, Healthcare, Financial Services, and Enterprise applications. Proven track record of delivering 80–85% automation coverage across targeted regression and critical QA workflows, managing a 480-test automation suite, reducing regression execution time from 15–20 hours to just 3 hours and 42-50 minutes, cutting manual testing effort by 70–80%, and reducing defect leakage by 61%.

Strong hands-on expertise in Python, JavaScript, Selenium, Playwright, Cypress, Appium, REST API automation, SQL, CI/CD integration, Jira, and Azure DevOps, with experience in scalable automation frameworks, end-to-end testing, backend validation, and release readiness. Actively advancing AI-driven quality engineering through AI-assisted testing, Generative AI validation, LLM testing, RAG pipeline evaluation, AI chatbot quality assurance, hallucination detection, and conversational reliability, while exploring AI Agents and Model Context Protocol (MCP) integrations.

Combines technical depth with strategic quality ownership, cross-functional collaboration, stakeholder management, and team mentorship to strengthen test effectiveness, accelerate release cycles, improve product reliability, and align quality engineering initiatives with business outcomes. Passionate about building scalable, intelligent, and data-driven testing solutions that evolve traditional QA into modern, AI-enabled quality engineering.

CORE COMPETENCIES

AI-Driven Quality Engineering | LLM-Assisted MCP | Self-Healing Automation | Automated Test Generation | QA Strategy Ownership | Python Test Automation | API Testing | Web & Mobile Automation | Manual Testing | Risk-Based Testing | Quality Gates & Release Readiness | Agile/Scrum | Stakeholder Management | Test Strategy | Automation Framework Design | Risk-Based Testing | Release Management | Defect Management | Shift-Left Testing | Web, Mobile and API Testing | Performance Testing | CI/CD | Quality Metrics

TECHNICAL SKILLS

- **AI/Intelligent QA:** VS Code, Claude, Cursor, Applitools, LLM-Assisted MCPs connectors
- **Practices:** Test planning, Regression Testing, Defect Analysis, Release Readiness, Shift-left Testing, Reporting, Agile/Scrum
- **Languages:** Python, JavaScript
- **API & Services:** Postman, REST Assured, Swagger, FastAPI
- **Web and Mobile Automation:** Appium, BrowserStack, Playwright, Android Studio, Xcode
- **CI/CD & DevOps:** Jenkins, GitHub CI/CD, Docker, Bitbucket, Bitrise
- **Test Management:** Jira, Azure DevOps, TestRail, Zephyr, Xray
- **Performance & Data:** JMeter, Database testing, Power BI

PROFESSIONAL EXPERIENCE

Senior QA Engineer | QA Automation & AI Quality Engineering

Twin Health Inc. | Chennai, India | Mar 2022 – Present

- Lead a team of 4 QA engineers. For 2 direct reports, I plan career growth and mentor them. For the other 2, I assign sprint work and review their automation code, resolve blockers and help plan sprint work.
- Maintain and extend a Python **automation suite of 480 tests: 160 Web UI (Playwright), 250 Mobile (Appium on BrowserStack) and 70 API (REST)**. Tests run through Bitrise and GitHub.
- **Reduced regression cycle time from 15–20 hours (manual) to 3h 42m** with a 190-test automated regression suite across Web, Mobile and API.
- **Automated 70–80% of the existing manual test cases**. The automated **tests cover 80–85% of requirements and user stories**.
- **Production defects fell by about 61% (from about 18 to 7**), comparing the 6 months before automation with the 6 months after.
- Use Claude with Playwright MCP on the Web UI suite to explore the application and help write Playwright tests in Python. Standard runs use Python Playwright.
- Built a custom HTML execution report for the mobile suite, generated after test runs and shared through Slack.

SELECTED PROJECTS AND AUTOMATION WORK (Under Current Company)

Sprint Release Conductor (Claude, MCP, Bitrise, Slack)

- Built with Claude and MCP, triggered by a Bitrise cron or Slack. Scripted logic checks daily whether the sprint build has been triggered and sends a message to the QA channel (start testing) or the Sprint RC channel (trigger the build).
- Claude, connected to Slack and Bitrise through MCP, writes the Slack messages and failure summaries and generates the report emailed on sprint ship date. Failed builds are flagged to the Sprint RC and Leads channels. The team uses it daily.

AI-Assisted Test-Case Generation

- Built a workflow where Claude reads requirements from Jira or Confluence pages, uses a custom skill file to create test cases and test steps, adds them to Jira, and sends a Slack message so the team can review them.

Self-Healing Locators (Mobile and Web)

- When a locator fails and the framework's retry option is enabled, Claude (through MCP) inspects the page source, finds a replacement and applies it. The healed locator is saved in a separate store that the framework reads on later runs. The original locator is kept as a fallback, and test code is not modified.

MCP Connector Module

- Developed MCP_connectors.py in the Python framework to link Claude to the web and mobile apps under test, Jira and Confluence. The test-case generation workflow and self-healing run through it.

QA Associate Consultant – QA

GlobalLogic | Noida, Uttar Pradesh, India | Jun 2014 – Mar 2022

- Led a 5-member QA engineering team across Agile projects, owning test strategy, planning, estimation, execution, quality reporting, mentoring, and release readiness.
- Defined risk-based QA strategies, automation roadmaps, test plans, quality gates, and release criteria aligned with product requirements and delivery timelines.
- Led mobile automation initiatives using Appium, Android Studio, Xcode, and BrowserStack across Android and iOS applications.
- Established QA–Product–DevOps collaboration for defect resolution, environment readiness, release planning, UAT, and continuous delivery.
- Represented QA in customer steering committees and provided quality leadership through UAT, production readiness, go-live, and post-release quality activities.
- Mentored QA engineers on automation engineering, testing practices, Agile delivery, troubleshooting, and technical problem solving.
- Contributed QA expertise during solution and software design phases through IT project steering committees, identifying quality risks early in the lifecycle.
- Supported performance testing and capacity-related quality activities while prioritizing QA workload across sprint-based delivery.

QA Analyst & Project Coordinator

TechnoScore | New Delhi, India | Aug 2013 – Jun 2014

- Coordinated end-to-end QA activities for enterprise Web applications, including test planning, estimation, execution, defect management, reporting, and release preparation.
- Created test plans, QA processes, project documentation, and QA status reports aligned with client expectations.
- Managed client communication, training, troubleshooting, and issue resolution related to testing activities.
- Facilitated weekly project meetings and coordinated QA dependencies across client, development, and delivery stakeholders.
- Applied Agile practices to sprint execution and maintained visibility of testing progress against delivery milestones.

Associate

OCADO, ASDA (Walmart), ARYZTA AG | United Kingdom | Aug 2012 – Jan 2013

- Product quality check (Packaging, Stacking, Printing).
- Prepare a day to day QA report for the manager.
- Resolving Self-Checkout machine issues.
- Billing counter cashier.

EDUCATION

- Master of Science (MS), Computer Science — University of Bedfordshire, Luton, United Kingdom — Passed | October - 2010
- Bachelor of Computer Applications (BCA) — Maharshi Dayanand University, Rohtak, Haryana — Passed | July - 2006

AWARDS & CERTIFICATIONS

- Certified Scrum Product Owner (CSPO) — Scrum Alliance
- AI-Driven Test Automation Engineer — TestRigor Learning
- Engineer Excellence Award — 2018 and 2020
- Spot and Kudos Awards for QA leadership and timely delivery
- Client recognition for project success and cross-functional collaboration

ADDITIONAL INFORMATION

- Languages: English (Fluent), Hindi (Fluent)
- Global Experience: United Kingdom, US and India
- Valid B1/B2 US Visa till 2032
